A screenshot of the RethinkDB Data Explorer interface. The top navigation bar includes "RethinkDB", "Dashboard", "Tables", "Servers", "Data Explorer", and "Logs", along with a search bar. Below the navigation bar, there are four status indicators: "Connected to Magnus", "Issues No issues", "Servers 2/2 reachable", and "Datacenters 2/2 reachable". The main content area is titled "Data Explorer" and contains a code editor with a MongoDB query: 

```
1 r.db('github').table('events')
2 .filter(r{'type'}.eq('PushEvent'))
3 .groupBy('name', r.count)
4 .eqJoin('grou
```

 Below the code editor, there is a description of the `eqJoin` function: `eqJoin( leftAttr, other[, rightAttr] )`. It states: "An efficient join that looks up elements in the right table by primary key." It includes two examples: "Ex: Let our heroes join forces to battle evil!" and "Ex: Table 'dc' has a primary key of 'hero\_name'. Without specifying it we'll default to 'id'." There are "Clear" and "Execute" buttons to the right of the code editor. A large play button icon is overlaid on the screenshot.
